HandsFree Dev Companion

HandsFree Dev Companion is a voice-first GitHub workflow assistant with a Python/FastAPI backend and a React Native mobile client.

It supports command execution, confirmation-gated side effects, agent delegation, notifications, AI capability workflows, and Meta AI Glasses audio integration.

What You Get

- Natural-language command handling through `POST /v1/command`
- Safe, policy-aware side effects (request review, rerun checks, comment, merge)
- Token-based confirmation flow for destructive/high-risk operations
- Agent task delegation, task tracking, and result retrieval
- Notification delivery APIs and subscription management
- AI capability execution endpoints and policy reporting
- Dev-friendly fixture modes plus live GitHub/OpenAI integrations

Quick Links

- Getting Started

- Documentation Index
- Package Guide
- Architecture
- Configuration Guide
- Configuration Reference
- Authentication
- Mobile App Docs
- OpenAPI Spec

Architecture Summary

System layers:

- Mobile/Device layer:
  - React Native app, native Bluetooth audio modules, Meta AI Glasses integration
- API layer:
  - FastAPI application in src/handsfree/api.py
- Domain layer:
  - Commands, actions, agents, AI, GitHub, notifications, policy/rate-limits
- Persistence/cache layer:
  - DuckDB + optional Redis

Backend Package Map

Core backend package: src/handsfree

- src/handsfree/api.py: FastAPI app and endpoint handlers
- src/handsfree/models.py: shared request/response models
- src/handsfree/auth.py: auth mode and user resolution
- src/handsfree/commands: intent parsing, routing, profile behavior, pending actions
- src/handsfree/actions: shared side-effect orchestration
- src/handsfree/agents: delegation service, task lifecycle, result views
- src/handsfree/github: GitHub auth/provider/execution logic
- src/handsfree/ai: AI capability execution and backend policy integration
- src/handsfree/db: database modules and migrations
- src/handsfree/notifications: notification delivery providers

For complete package details and runtime flows, see docs/PACKAGE_GUIDE.md.

API Surface (High-Level)

Canonical contract: spec/openapi.yaml

Main endpoint groups:

- Commands and confirmation:
  - `/v1/command`
  - `/v1/commands/confirm`
  - `/v1/commands/action`
- Side-effect actions:
  - `/v1/actions/request-review`

    - `/v1/actions/rerun-checks`
    - `/v1/actions/comment`
    - `/v1/actions/merge`
- Agents:
    - `/v1/agents/tasks*`
    - `/v1/agents/results`
- AI:
    - `/v1/ai/*`
    - `/v1/admin/ai/*`
- Notifications:
    - `/v1/notifications*`
    - `/v1/repos/subscriptions*`
- GitHub OAuth/connections:
    - `/v1/github/oauth/*`
    - `/v1/github/connections*`
- Dev/media utilities:
    - `/v1/tts`
    - `/v1/dev/audio`
    - `/v1/dev/media`
    - `/v1/dev/peer-chat/*`

Local Development Quick Start

Prerequisites

- Python 3.11+
- Docker + Docker Compose
- Node.js 18+ (for mobile development)

1. Backend Setup

```
git clone https://github.com/endomorphosis/lift_coding.git
cd lift_coding
make deps
make compose-up
make dev
```

Backend runs at `http://localhost:8080`.

2. Basic Health Check

```
curl http://localhost:8080/v1/status
```

3. Quick Command Test (Dev Auth Mode)

```
curl -X POST http://localhost:8080/v1/command \
  -H "Content-Type: application/json" \
  -H "X-User-Id: 00000000-0000-0000-0000-000000000001" \
  -d '{
```

```
    "input": {"type": "text", "text": "show my inbox"},
    "profile": "default",
    "client_context": {
      "device": "cli",
      "locale": "en-US",
      "timezone": "UTC",
      "app_version": "0.1.0"
    }
  }'
```

4. Mobile App Setup

```
cd mobile
npm ci
npm start
```

For simulator/device workflows, use mobile/README.md.

Authentication Modes

Configured via `HANDSFREE_AUTH_MODE`:

- `dev`:
  - Dev-friendly mode; commonly uses `X-User-Id`
- `jwt`:
  - `Authorization: Bearer <jwt-token>`
- `api_key`:
  - `Authorization: Bearer <api-key>`

See full details in docs/AUTHENTICATION.md.

Configuration

Start with:

- CONFIGURATION.md for practical setup paths
- docs/configuration-reference.md for exhaustive env keys

Key integrations include:

- GitHub live/fixture modes
- OpenAI TTS/STT provider selection
- Notification provider settings (APNS/FCM/WebPush/Expo)
- Agent delegation provider settings

Agent Delegation and Runners

HandsFree can delegate tasks to external runners.

Provider selection precedence:

1. Explicit provider in request
2. `HANDSFREE_AGENT_DEFAULT_PROVIDER`
3. Auto `github_issue_dispatch` when dispatch repo + token are configured

4. Fallback provider

Runner setup docs:

- docs/agent-runner-setup.md
- docs/AGENT_RUNNER_QUICKSTART.md
- docs/MINIMAL_AGENT_RUNNER.md

Testing and Quality

Run checks from repo root:

```
make fmt-check
make lint
make test
make openapi-validate
```

Or run full tests directly:

```
.venv/bin/pytest -q
```

Docker

Run with Compose

```
docker compose up -d
docker compose logs -f api
```

Stop

```
docker compose down
```

Repository Layout

Top-level directories and key docs:

- src: backend source code
- tests: test suite
- mobile: React Native client
- docs: operational and feature docs
- spec: OpenAPI and command grammar
- migrations: SQL migrations
- implementation_plan: design and rollout docs
- GETTING_STARTED.md: setup guide
- DOCUMENTATION_INDEX.md: full docs navigator

Contributing

See CONTRIBUTING.md for contribution flow, coding standards, and testing expectations.
